

Australia, and has since been obtained off the north-east coast by H.M.S. "Alert." A number of young specimens from St. Helena are preserved in the British Museum. *Aphanipathes pennacea* (Pall.) has been obtained off the same island; it also occurs in the Indian Ocean. The remaining species were obtained during the voyage of the Challenger,—*Schizopathes crassa*, off Monte Video; *Taxipathes recta* and *Dendrobrachia fallax*, off Ascension.
